

# CREATIVITY

We often think of creativity in relation to arts and crafts, but we can use creativity to solve problems, make new friends, and think outside the box!

## Problem Solving

*When there is a problem, before taking action, think of at least two ways that may solve it. Ask yourself, what has worked before? What can I do differently to solve this problem? Have I seen something similar to this before?*

## Friendships

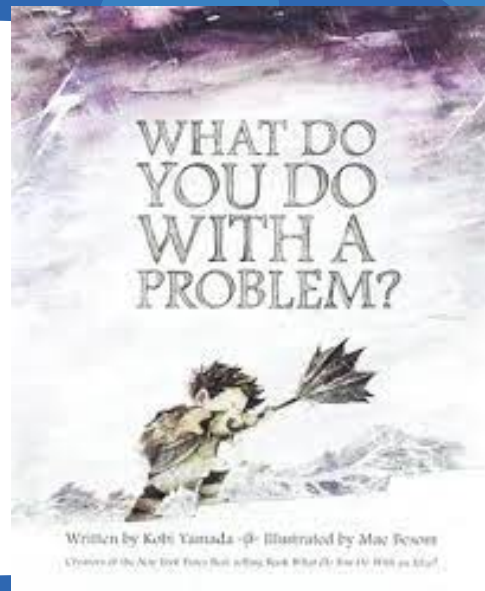

*When making new friends, ask yourself, what do I want to know about this person? Be curious! Do they have a pet? Maybe a sibling? Think, what might they want to know about you? You can share things you are interested in, like dinosaurs or science!*

## Books about creativity...

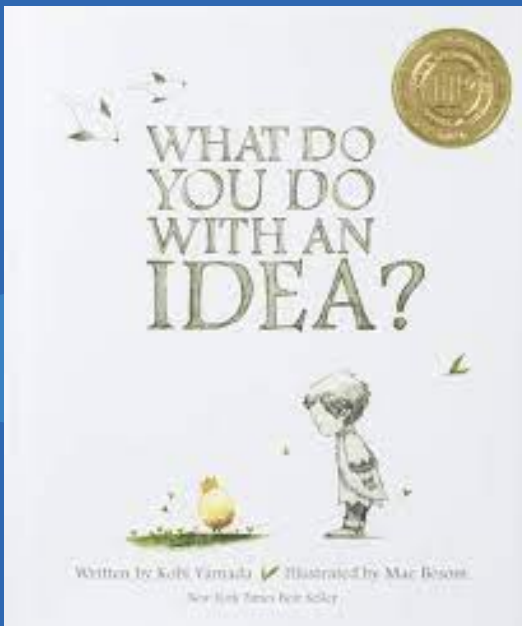

All about problem solving, and approaching problems with an open-mind! Be a part of the solution!

(Picture Linked to Read Aloud)

## Continued...

All about following your inspiration, staying curious, and seeing something through to the end! (Picture Linked)

## Maker Space coming to Springbrook

The Innovation Lab will be open to students as a "maker space" during select lunch periods this year. There will be glue, paper, markers, and more! There will be no formal instruction, students will use their creativity to create whatever comes to mind!
